

## Course on "Operation and safety of PWRs"

C. Renault, P. Dumaz, JC. Klein, H. Grard, F. Fouquet (CEA) + Specialists (AREVA) + Specialists (EDF)

Units and LO Statements		
<b>Unit 1 – Operation under normal conditions</b> <b>(18 hours)</b>	<b>Responsibility / Autonomy</b>	
	Architecture and related operation of a PWR (EQF=7)	
	<b>Skills</b>	<b>Knowledge</b>
<ul style="list-style-type: none"> <li>• Architecture and functional analysis of PWRs (primary and secondary components, containment building, auxiliary systems)</li> <li>• PWR normal operation                             <ul style="list-style-type: none"> <li>○ base load operation</li> <li>○ start-up procedures</li> <li>○ shutdown procedures</li> </ul> </li> <li>• PWR control aspects                             <ul style="list-style-type: none"> <li>○ load-follow operation</li> <li>○ performance of control modes</li> </ul> </li> <li>• Safety in operation                             <ul style="list-style-type: none"> <li>○ regulation</li> <li>○ protection systems and procedures</li> <li>○ typical operational transients</li> </ul> </li> <li>• PWR core and fuel management</li> <li>• Practicals on PWR simulator and training reactor.</li> </ul>	<ul style="list-style-type: none"> <li>• Understand basic principles of PWRs operation</li> <li>• Be able to connect safety equipment with their function</li> <li>• Understand the needs of safety regulation</li> <li>• Link the safety needs to their related equipment</li> </ul>	<ul style="list-style-type: none"> <li>• Basic principle of PWRs                             <ul style="list-style-type: none"> <li>○ Core physics</li> <li>○ Thermal-hydraulics</li> </ul> </li> <li>• 1300 MWe PWR architecture                             <ul style="list-style-type: none"> <li>○ Function and design of safety equipment</li> </ul> </li> <li>• Comparison to other designs</li> <li>• Normal operation.                             <ul style="list-style-type: none"> <li>○ base load operation</li> <li>○ start-up</li> <li>○ shutdown</li> </ul> </li> <li>• Safety in operation.</li> </ul>
<b>Unit 2 – Safety in accidental conditions</b> <b>(12 hours)</b>	<b>Responsibility / Autonomy</b>	
	Safety approach; Management of transient and accident operation (EQF=7)	
	<b>Skills</b>	<b>Knowledge</b>
<ul style="list-style-type: none"> <li>• PWR safety approach                             <ul style="list-style-type: none"> <li>○ Deterministic approach</li> <li>○ Probabilistic approach</li> <li>○ Calculation tools</li> </ul> </li> <li>• Practicals on PWR simulator and training reactor.</li> <li>• PWR safety systems</li> <li>• Accidental scenarios                             <ul style="list-style-type: none"> <li>○ Loss Of Coolant Accidents (LOCA)</li> <li>○ Steam Generator Tube Ruptures (SGTR)</li> <li>○ Steam Line Secondary Break</li> <li>○ Reactivity Initiated Accidents (RIA).</li> </ul> </li> <li>• Post-accident management (state-oriented approach)</li> <li>• Innovative tracks of LWRs                             <ul style="list-style-type: none"> <li>○ burn-up, conversion ratio, materials and fuels</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>• Make safety study while referring to safety regulation</li> <li>• Use the most appropriate safety approach</li> <li>• Get familiar with realistic PWR complex operation</li> <li>• Understand the main accident sequences and the role of operators</li> </ul>	<ul style="list-style-type: none"> <li>• Safety study rules.</li> <li>• Safety methodologies.</li> <li>• In situ analysis of reactor control.</li> <li>• Realistic operational transients.</li> <li>• Main accident sequences of a PWR.                             <ul style="list-style-type: none"> <li>○ Loss Of Coolant Accidents (LOCA).</li> <li>○ Steam Generator Tube Ruptures (SGTR).</li> <li>○ Steam Line Secondary Break.</li> <li>○ Reactivity Initiated Accidents (RIA).</li> </ul> </li> <li>• The TMI-2 accident.                             <ul style="list-style-type: none"> <li>○ Initiators.</li> <li>○ Development.</li> <li>○ Consequences.</li> </ul> </li> <li>• Innovative designs.</li> </ul>
<b>Assessment criteria</b> = to demonstrate mastery of basic nuclear reactor physics and operation		

Recommended assessment methods: Written test and/or oral face to face interview		
------------------------------------------------------------------------------------	--	--

Course applicable (in part) for the following job profiles:

- 1.0.01: Nuclear Safety Manager
- 1.0.02: Safety Assessment Specialist
- 1.0.10: Safety Design Engineer
- 1.2.01: Design Manager
- 1.2.09. System Design Engineer
- 1.4.07. Licensing Manager
- 2.1.06. Engineering Manager
- 2.1.07. Operation Manager
- 2.2.01. Shift Engineer
- 2.2.02. Senior Reactor Operator/CRO
- 2.6.01. Safety and Security Manager
