

```
#include <iostream>
using namespace std;

bool controlla(int *v, int n){
    if(n==1)
        return true;
    if(v[n-2]<v[n-1])
        return false;
    return controlla(v,n-1);
}

int main(){
    int v1[] = {4,2,1,-10};
    int v2[] = {2,4,-1,0};

    cout << controlla(v1,4) << endl;
    cout << controlla(v2,4) << endl;

    return 0;
}
```
